

What allows a computer to operate?

I am a human	This is a computer
I can think; I can decide; I can solve problems; I ask questions ;I am intelligent.	Computers cannot think; the computer can not decide; the computer carries out the orders; the computer is stupid.
I have a heart; I have a mind; I have information; I have memories.	Computer has software
I have bones. I have muscles	Computer has hardware

Computer

Hardware	Software
Keyboard, monitor, mouse, scanner, printer, modem	data, information, commands, programs

1. Read and write the missing words

Humans..... ..questions	Computersorder
Humans.....problems	Computers is.....
Humans.....decide	Computers.....decide

2. Software and Hardware

- a. The man has the bones and the muscles and the computer have.....
- b. The man has the.....and the computer have hardware
- c. The data is,
- d. The keyboard is
- e. The programs is.....
- f. The computer can operate because it is..... +
- g. The.....is logical part.
- h. Theis physical party

Computer = Software + Hardware

Title: First lesson:

Computer = Software + Hardware

The different between the humans and the computers.

In this lesson we've see the different between the humans and the computers.

We've see that the humans have a brain, they can think and they have bones and muscles. The computers, on the contrary, haven't got a brain and they are stupid and they have got Software and Hardware.

Software is such as the brain of the humans and the hardware is such as the muscles and the bones of the humans.

The computer is stupid and can't solve problems. The men are intelligent and solve problems.
